

Post-Baccalaureate Programs

What is a post-baccalaureate program? The post-baccalaureate program offers students an opportunity to either to finish prerequisite courses or to improve their academic standing for a more competitive application. Some students may also take this opportunity to advance their career or prepare them for graduate or professional school.

Some programs will also offer internships and preceptorship experiences, preparation for admission tests, or volunteer hours.

There are several programs in the state of Texas and throughout the nation. The most common is an accelerated, one-year program, for students who have completed their undergraduate pre-med preparations and want to enhance their qualifications for entrance into medical or dental school.

Programs range from 12 – 24 months and are designed to prepare students for acceptance into medical and dental schools, but at a slightly less rigorous pace.

Selection Criteria: This varies for each program, but most require a 3.0 GPA and a 496 MCAT score (17 DAT). These programs are very selective, and many have class sizes of less than 50 students each year. Most programs require a bachelor's degree, but all require that you have demonstrated academic excellence, proof of care giving experience (such as volunteer work), and you'll need to provide letters of recommendation.

Financial aid: These schools do not provide financial aid scholarships, only federal loans. They are also very costly and that should be a factor in your decision to apply.

Note: **Successful completion** of a post-baccalaureate program does not guarantee admission into a medical or dental school.

Please see next page for a list of Texas post-baccalaureate programs and their requirements.
